

Acrylic structure setup guide

Step one:

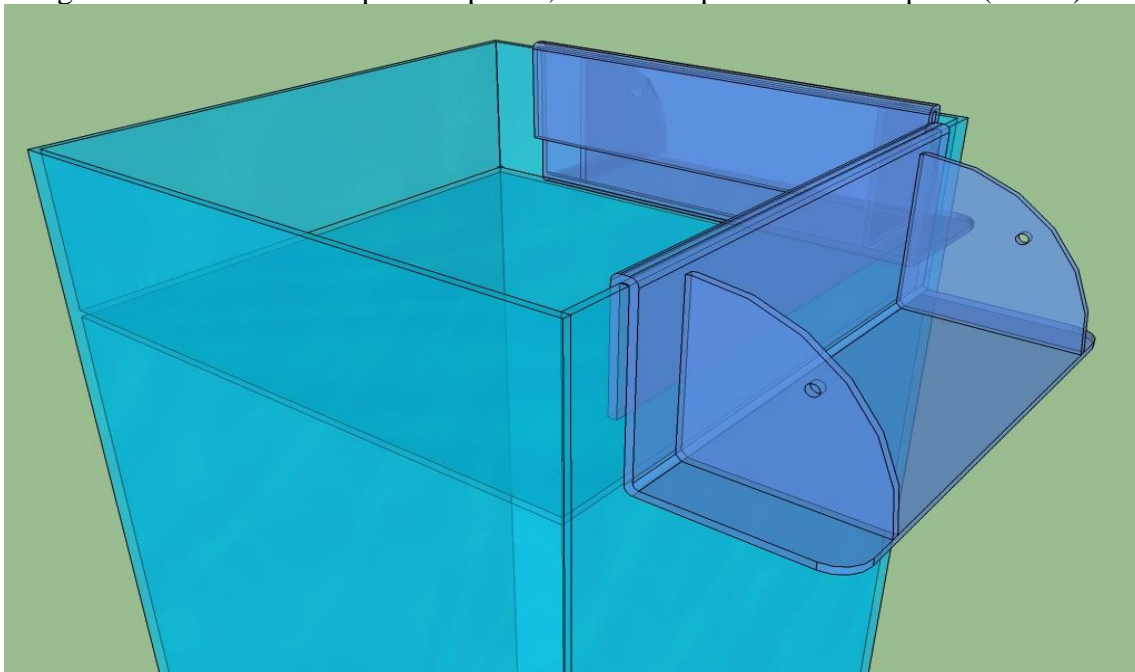

Setup the four towers with about 7'-4" between the base of each unit.

Step two:

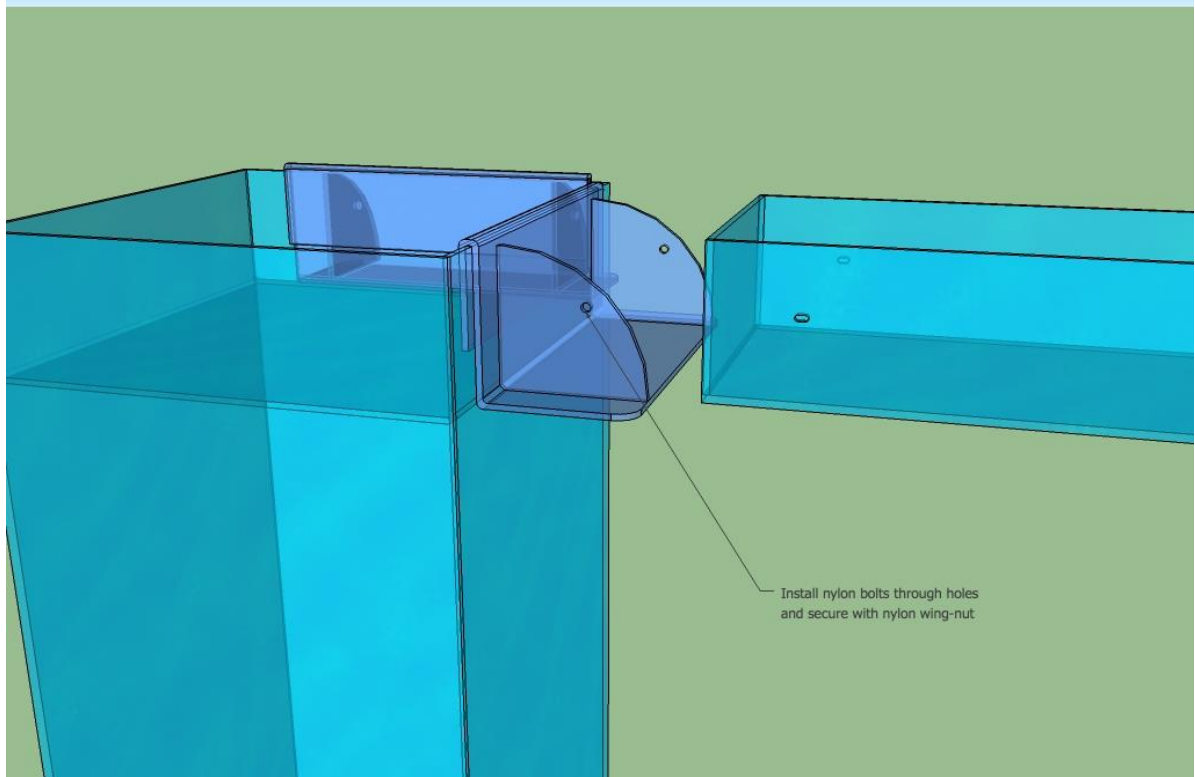

www.eoplastics.com

Hang each bracket on the top of the pillars, each must point towards a pillar (total 8).

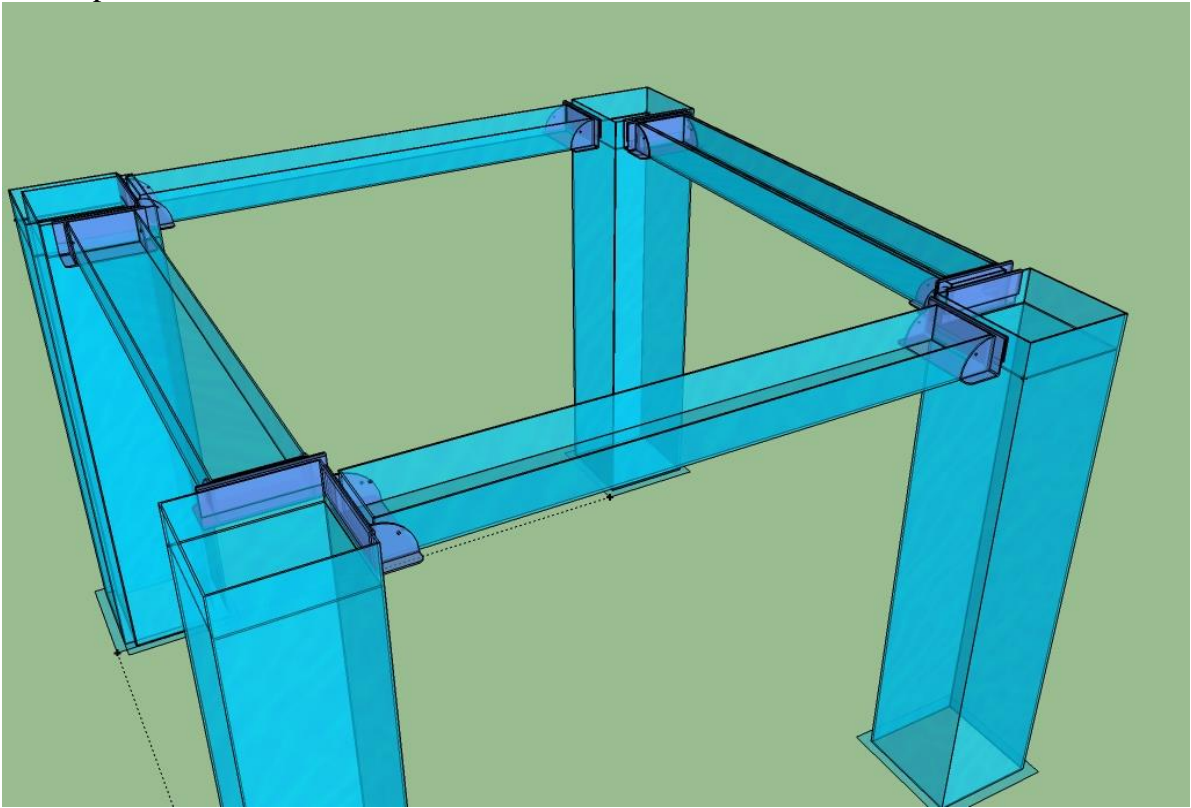

Step three:

Place horizontal gutters into each bracket on both ends, and secure with plastic bolts through each hole. Pillar placement may require slight adjustment to accommodate.

Care and cleaning:

Careful handling and proper cleaning will help maintain a pristine appearance.

UNDER NO CIRCUMSTANCES SHOULD YOU USE ANY CHEMICAL CLEANER.

A bottle of specially formulated acrylic cleaner has been provided along with Softkloth towels which can safely be used for everyday cleaning.

Refills of both are available from ePlastics.

NEVER USE GLASS CLEANER

In the event of small scratches, a polishing compound may be used.

There are various cleaners and polishing compounds available at

http://www.eplastics.com/Plastic/Plastic_Polish

It is recommended that extreme care is taken during transport of each piece. Wrap each piece in a non-scratch, protective material such as bubble wrap, or possibly a cotton sheet. Keep it wrapped, or wear soft gloves during setup to alleviate excessive cleaning of fingerprints before your event.
